

INPAKOMED

CLEANROOM PACKAGING

Taking care of healthcare

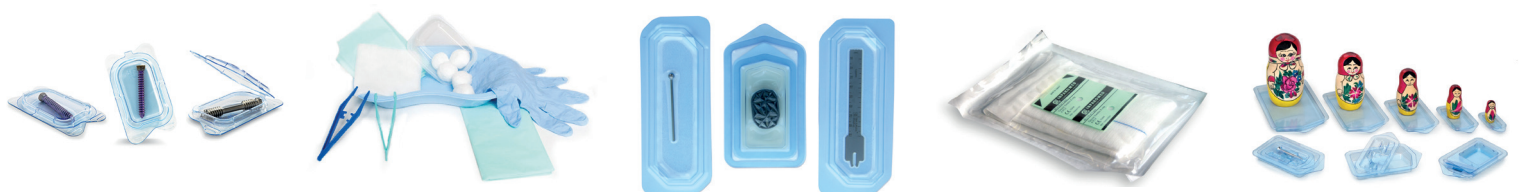

TAKING CARE OF HEALTHCARE:

Inpakomed is a division of Brupak Beheer. This organization comprises a few business segments which have amply won their spurs within the packaging industry.

In particular, Inpakomed is specialized in the packaging of medical devices under clean room conditions.

Inpakomed offers the possibility of packaging all kinds of medical devices, from gauzes to implants. The list of references witnesses the appreciation of a growing number of customers for Inpakomed's services and the care in carrying out the assignments.

ORGANIZATION

At Inpakomed we firmly believe in a horizontal organization. Inpakomed is part of the Brupak Group. All divisions of the Brupak Group follow the same principle and are all characterized by a horizontal organization.

SERVICE

Packaging under clean room conditions (ISO class 7, Ref. ISO 14644-1) is mandatory for Inpakomed's business relationships who set strict requirements as far as hygiene and low contamination of their products are concerned.

HIGH QUALITY STANDARDS

Our customers require high quality standards in order to be able to maintain their own Quality Management Systems and to fulfill regulatory requirements. Inpakomed implements and maintains a Quality Management System in compliance with ISO 13485 and is controlled by an independent party on a regular (yearly) basis. The requirements which must be fulfilled are quite broad and they do not solely concern technical issues but also, for instance, personnel.

Just to mention an example, a prerequisite for all employees is that they be regularly trained in order to reduce the risks of errors during the various packaging activities, to suit most customers' requirements. The machines which are operated in the clean room are "state-of-the-art" and have been completely adapted for use in a controlled environment area.

AT INPAKOMED WE FIRMLY BELIEVE IN A HORIZONTAL ORGANIZATION

The strength of the cooperation within the Group ensures an efficient structure as far as costs are concerned. The investments in administrative systems are shared. And the same goes for the knowledge in the same field.

Another advantage coming from this kind of approach is that personnel can easily be exchanged within the three divisions, thus making us fast and accurate in responding to the needs of our customers.

In short: we are a young organization with quite some history. Inpakomed bv was founded in 1992 for the packaging of sterile (semi) medical products for the medical industry and related markets.
